Languages

English - B2
currently attending B2/C1 course

Technologies

HTML5

CSS3 / Sass

JavaScript

ECMAScript 6 (ES6)

TypeScript

React

React Router

Profile

As a junior front-end developer I craft visually captivating, responsive and user-friendly applications. With over a year of experience in website development, I've gained strong foundations in HTML, CSS, and JavaScript, with React as my primary area of expertise.

Prior to my career in web development, running my own photography business sharpened my aesthetic sense and time management skills while providing me with a strong business perspective.

I thrive in collaborative environments and am always eager to take on new challenges and projects. Colleagues can expect me to be a positive and hardworking developer, who consistently completes the work undertaken.

Portfolio

Auto Skup | **Code on Github** | https://autoskup-krk.pl/
A **commercial project** that involved developing a two-page website with Home and Contact pages. The Home page details the activities and advantages of the client company, while the Contact page provides all necessary contact information for the client.
• Built with **React**, **React Router**, **Vite**,
• **Material UI** (customized responsive NavBar), styled with **Sass,**
• ensuring a seamless user experience across all devices using **Flexbox** and **responsive web design.**

MOViEon | **Code on Github** | https://movieon24.netlify.app
A movie website based on **TMDB API**, modeled on streaming services such as SkyShowTime. It recommends movies premieres as well as popular TV series. It is used to save favorite films in *My list* prepared for the user, and allows to search for movies from **TMDB API** in the created *search engine*.
• Built with **React**, **REST API**, **React Router DOM** for routing, **Vite**,
• styled with **SCSS**, npm Styled Components - carousels on the home page,
• **Context API** transfers data globally and **LocalStorage** stores the data,
• modal made with **Material UI** showing details of a given movie/series including a description, genres, photos and a link to the trailer on YouTube,
• Thanks to the use of **RWD** website has a **mobile version**.

ReadyToGo | **Code on Github** | https://readytogoapp.netlify.app
A to-do list web app where a packing list for every trip can be created. The items added to list can be checked off or deleted. After logging into the application by **form**, user's list is saved and stored in the database and ready to be edited and reused.
• Built with **React**, **React Router** for routing, **Vite**, and styled with **SCSS**,
• Uses **Supabase** as a backend support,
• Application is available in a **mobile version** thanks to RWD approach.

Online_shop | **Code on Github**
A responsive **e-commerce** application simulating an online fashion shop where users can browse fashion items, add them to cart and favorites. Integrated with the **FakeStore API** to dynamically display product data.
• Built with **React**, **React Router DOM**, **SessionStorage**, **Vite**,
• use of **TypeScript** ensures type safety and improves code quality,
• **React Query** manages server state, caching and efficient data fetching,
• **Redux Toolkit** ensures effective state management,
• tested with unit tests using **React Testing Library** with **Jest**,
• styled with **TailwindCSS** project is **fully responsive**, utilizes **RWD** principles

Tools

Responsive Web Design

React Query (TanStack)

REST API

Material UI

Tailwindcss

Redux, Redux Toolkit

Vite

Webpack, Parcel

GIT, GitHub

Supabase

Netlify

Trello

Slack

Canva

Visual Studio Code

Webstorm

Courses

ScrumLab Course

CodersLab IT School | 2023

building a project in JavaScript using **SCRUM** Methodology and **Trello** with a team in 12 days

Professional Experience

Junior Frontend Developer

Freelancer

May 2023 - Present

Building several websites to my portfolio has sharpened my analytical approach and strategic thinking, enhancing my problem-solving skills with every resolved issue and completed task in made projects.

In my work I strongly prioritize user experience and responsiveness of the applications I create, using modern web technologies like React Query, Tailwindcss and Material UI to deliver intuitive interfaces and high-quality software solutions. These principles drive all my portfolio projects.

React Frontend Developer

Freelancer

January 2024 - March 2024

I designed and developed a **React-based** commercial website *Auto Skup* for a trading company. I managed the complete development cycle, starting from client requirements analysis, throughout **UI design** and its execution to deployment via **Netlify**. I mainly focused on the **responsiveness** of the website and professional presentation of the client's company in articles on the Home Page.

Photographer

Self-employment

2021 - 2023

Working with CaptureOne graphics program and clients, photographing, self work planning

Education

2011 - 2013

Kielce University of Technology, **Master of Economics**

2008 - 2011

J.Kochanowski University in Kielce, **Bachelor of Economics**

Hobby

photography

I photograph vibrant cities, people and nature

travelling

While travelling I enjoy meeting new people and dicovering new places, different cultures and cuisines. I usually visit Europe and plan to visit Asia
